

Threephase AC motor for maximum performance and low energy consumption

Precise load positioning with electronically controlled lifting and proportional lowering

Fully manoeuvrable with tiller in upright position via crawl speed button

Optimum drive characteristics with hydraulically cushioned ProTraLink suspension.

Multi-task handle for intuitive operation

EJD 220

Electric pedestrian pallet truck/stacker (2000 kg)

The EJD 220 is a multi-talented truck when it comes to the handling of loads. It combines the operation of a pedestrian pallet truck and stacker in one machine: from lorry loading and offloading to pallet transporting, to stacking (max. 2560 mm lift height), it is a flexible truck.

Its greatest advantage is as a double-deck stacker, it is able to lift two Euro pallets at the same time. Compared with a traditional pallet truck/stacker, it can thus get through its workload twice as fast. The EJD can carry 2000 kg when applied as a pallet truck, 1000 kg with the forks raised or 2 x 1000 kg in double-deck operation. The

EJD is an extremely sturdy and reliable truck: the robust 8 mm chassis, the powerful 1.6 kW drive with the latest threephase AC technology, batteries with up to 375 Ah and lateral removal as well as the rigid mast ensure extremely efficient operation in even the most demanding applications.

The patented ProTraLink support wheel system with hydraulic cushioning for safe stacking ensures high stability and safe travel – an absolute must on ramps and loading platforms.

The raising support arms also contribute to safe travel, for instance on thresholds,

ramps and uneven floors. They increase the floor clearance and thus ensure simple and safe operation “cross-over”.

And if space becomes too tight on lorries or in narrow aisles, the crawl speed button facilitates safe travel with the tiller in the upright position. One touch of the button is sufficient: the brake is released and the drive switch controls travel speed at automatically much reduced speed.

Technical data in line with VDI 2198 as at: 12/2009

2) Diagonal according to VDI: +225 mm
3) Load section lowered: +48 mm
4) Battery compartment L (375 Ah) +72 mm

Make use of the advantages

Innovative threephase AC technology

Jungheinrich threephase AC motors and controllers offer higher performance levels and save on running costs. The benefits are:

- High efficiency levels with excellent energy management.
- Powerful acceleration.
- No carbon brushes – maintenance-free drive motor.
- Drive motor and controller perfectly tuned by in-house production.

Double-deck lorry loading

Comfortable stacking and retrieving

All lifting and lowering operations are easily controlled by the multi-functional control handle. This allows the operator to concentrate fully on stacking and retrieving. Other features that make stacking and retrieving particularly safe and efficient include:

- Precise, sensitive load lifting through speed controlled hydraulic motor.
- Gentle load depositing with proportional hydraulics.
- Long safety tiller provides sufficient distance between the operator and the truck.

- Crawl speed button for travelling in restricted conditions with tiller in upright position.

Optimum cornering and stable travelling

The sprung – hydraulically cushioned support wheels – is connected via the patented ProTraLink suspension which distributes the force depending on the situation: evenly on all wheels, concentrated on the outer support wheel when cornering. Other advantages are:

- Less support wheel wear when travelling up ramps at an angle. Both support wheels remain constantly at the same height through a mechanical link.
- On the EJD 220 ProTraLink adapts to the application: The suspension/cushioning is automatically adjusted depending on the load and lift height. The result: consistently high stability and hence safety, whilst transporting and stacking.

Work in comfort

The EJD is ideally suited for double pallet handling. It has been robustly designed for high performance operation. Other advantages:

- Robust mast: maximum load for support arm lift 2000 kg; for mast lift 1000 kg.
- Outstanding view of the forks over profiled battery cover.
- A support arm stop ensures consistently precise positioning of pallets on the forks.
- High-performance, lift motor copes easily lifting very heavy loads.
- Large detachable storage compartment and clip pad for storage.

Constant information flow

Extensive control panel gives the operator the satisfaction of having everything in view at all times.

Stacking pallets

- "CanDis" information display (optional) with additional hour meter and error code storage (optional).
- PIN activation of truck and choice of 3 travel programs via CanCode (optional).

Long operating times

The energy-saving threephase AC system combined with a 375 Ah battery capacity ensures long operating times:

- Battery compartment size M: 2 EPzS 250 Ah battery.
- Battery compartment size L: 3 EPzS 375 Ah battery.
- Sideways battery removal for rapid changing in a multi-shift environment.
- On-board charger (24 V/30 A for wet cell batteries and maintenance-free batteries) for easy charging at any mains socket (optional).

Optional equipment

- Cold store version.
- Load guard.
